

**AMENDMENTS TO THE CLAIMS**

IN THE CLAIMS:

Claims 1-19 (Cancelled)

20. (Currently Amended) A fatigue relieving/preventing apparatus associated with a steering wheel for controlling a vehicle comprising:

a first section that connects to a peripheral portion of the steering wheel; and

a second section that connects to, and extends from, the first section at the peripheral portion of the steering wheel, the second section extends from the first section outward at an angle to a plane across a face to the steering wheel, the second section for providing resting support for supporting at least a portion of a vehicular operator's body when pressure from the portion of the vehicular operator's body on the second section is less than the pressure for deforming the second section out of interference with the vehicular operator's ability to operate the steering wheel, and deforming out of interference with the vehicular operator's ability to operate the steering wheel when pressure from the portion of the vehicular operator's body on the second section is equal to or greater than the pressure for deforming the second section out of interference with the vehicular operator's ability to operate the steering wheel.

21. (Original) The apparatus as recited in claim 20, wherein the second section is deformable in at least one direction when deforming pressure is applied to such second section.

22. (Currently Amended) The apparatus as recited in claim 20, wherein the second section provides resting support for supports a portion of the vehicular operator's body when resting support pressure from such body portion is applied in at least one direction.

23. (Original) The apparatus as recited in claim 20, wherein the steering wheel includes a steering wheel for controlling at least a nautical vessel, an aircraft, or a ground transportation vehicle.

24. (Original) The apparatus as recited in claim 20, wherein the second section will return to an original first position after deforming pressure is removed therefrom.

25. (Original) The apparatus as recited in claim 20, wherein the portion of the body supported by the second section includes at least a forearm, wrist, or hand.

26. (Original) The apparatus as recited in claim 20, wherein the first section extends a length of a predetermined peripheral portion of the steering wheel.

27. (Currently Amended) ~~The apparatus as recited in claim 20 wherein the second section includes at least two second sections that each connect to the first section at separate locations.~~ A fatigue relieving/preventing apparatus associated with a steering wheel for controlling a vehicle comprising:

at least a first first section and a second first section that connect to a peripheral portion of the steering wheel; and

at least a first second section and a second second section that connect to, and extends from the first and second first sections, respectively, with the first and second second sections extending from the respective first and second first sections outward at an angle to a plane across a face to the steering wheel, the first and second second sections each providing resting support for at least a portion of a vehicular operator's body when pressure from the portion of the vehicular operator's body on the first or second second section is less than the pressure for deforming the first or second second section out of interference with the vehicular operator's ability to operate the steering wheel, and deforming out of interference with the vehicular operator's ability to operate the steering wheel when pressure from the portion of the vehicular operator's body on the first or second second section is equal to or greater than the pressure for deforming the first or second second section out of interference with the vehicular operator's ability to operate the steering wheel.

28. (Currently Amended) The apparatus as recited in claim 20 or 27, wherein the first ~~and second first sections are section is~~ deformable.
